The Seasons, the Equinox, and the Solstices The Solstices (Summer & Winter) The summer solstice occurs at the moment the earth's tilt toward from the sun is at a maximum. Therefore, on the day of the summer solstice, the sun appears at its highest elevation with a noontime position that changes very little for several days before and after the summer solstice. Equinox - Wikipedia An equinox is commonly regarded as the moment when the plane (extended indefinitely in all directions) of Earth's equator passes through the center of the Sun, which occurs twice each year: around 20 March and 22â€“23 September. In other words, it is the moment at which the center of the visible Sun is directly above the Equator. First Days of the Seasons 2018 | Fall Equinox, Winter ... On the vernal equinox, day and night are each approximately 12 hours long (with the actual time of equal day and night, in the Northern Hemisphere, occurring a few days before the vernal equinox). The Sun crosses the celestial equator going northward; it rises exactly due east and sets exactly due west.
